EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Stephen Keohane on 08/17/04.

The application has been amended as follows:

Figure 1 has been labeled as "prior art".

Cancel claims 5, 13 and 18.

Claims 6 and 7, "The method of claim 5" has been changed to --The method of claim 1--.

Claim 14, "The system of claim 13" has been changed to --The system of claim 10--.

Claims 19-20, "The program storage device of claim 18" has been change to --The program storage device of claim 15--.

Claim 1:

A method for displaying the status of tasks, comprising the step of:
displaying in a progress control bar a progress bar and a first action
button;

said progress bar visually representing progress of a primary background operating; [and]
said action button selectable by a user for initiating an action with respect to said primary background operation [.];
executing at least one secondary background operation;
displaying a second action button in said progress control bar; and
responsive to user selection of said second action button, displaying a drop list of second progress control bars, with one second progress control bar for each said secondary background operation.

Claim 10:

System for displaying the status of tasks operating in the background, comprising:
a status bar;
a progress control bar in said status bar including a progress bar and a first action button;
said progress bar visually representing progress of a primary background operating; [and]
said action button selectable by a user for initiating an action with respect to said primary background operation [.]; and
a second action button in said progress control bar responsive to user selection for alternately displaying and collapsing a drop list of second

progress control bars, with one second progress control bar for each of one or more secondary background operations.

Claim 15:

A program storage device readable by a machine, tangibly embodying a program of instructions executable by a machine to perform method steps for displaying the status of tasks, said method steps comprising:

displaying in a progress control bar a progress bar and a first action button;

said progress bar visually representing progress of a primary background operating; [and]

said action button selectable by a user for initiating an action with respect to said primary background operation [.] ;

executing at least one secondary background operation;

displaying a second action button in said progress control bar; and

responsive to user selection of said second action button, displaying a drop list of second progress control bars, with one second progress control bar for each said secondary background operation.

Claim 22:

A computer program product or computer program element for displaying the status of tasks according to method steps comprising:

displaying in a progress control bar a progress bar and a first action button;

Art Unit: 2179

said progress bar visually representing progress of a primary background operating; [and]

said action button selectable by a user for initiating an action with respect to said primary background operation [.];

executing at least one secondary background operation;

displaying a second action button in said progress control bar; and

responsive to user selection of said second action button, displaying a drop list of second progress control bars, with one second progress control bar for each said secondary background operation.

Claim 23:

A system for displaying the status of a plurality of threaded tasks operating in the background, comprising a status bar; a progress control bar in the status bar for a primary task operating in the background and including a progress bar and first and second action buttons; the progress bar visually representing progress of a primary background operation; said first action button being selectable by a user for initiating an action with respect to said primary background operation and [canceling] collapsing a drop list of secondary progress control bars for secondary tasks also operating in the background.

The following is an examiner's statement of reasons for allowance:

The Examiner has carefully considered the independent claims 1, 9, 10, 15, 22 and 23. The method and system for "displaying the status of a plurality of threaded tasks operating in the background" as claimed was not taught or suggested by the prior arts. The method and system for displaying in a progress control bar a progress bar which represents progress of a primary background operation and a first action button which is selectable by a user for initiating an action with respect to said primary background operation are well known in the arts as taught by Ording [US 2001/0055017] and Neilsen [US 6,639,687].

As Ording discloses a computer implemented method and corresponding apparatus for displaying in a progress control bar (figure 2A, 200a) a progress bar (figure 2A, 220) and a first action button (figure 2A, 230).

However, none of the references teach or suggest displaying in a status bar a progress control bar a progress bar, a first action and a second action buttons that responsive to user selection of said second action button, displaying a drop list of second progress control bars, with one second progress control bar for each said secondary background operation. The advantage of the method and system is displaying the status of plurality of background task in a non-obtrusive manner responsive to user request.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
